

Dominic Aquilina

Staff Front-End Engineer

I Build Experiences

Professional Summary

A **computer engineer** with **over 15 years** of building streamlined and accessible experiences across multiple verticals, specialising in user advocacy. By proactively engaging with key stakeholders, I identify and **eliminate their pain points**.

Relevant Skills

- **Front-End: Angular** (10+ years), **React** (2+ years), **Svelte** (1 year) - designing and building robust platforms and tooling across AgTech, AdTech, FinTech, Big Data, and more
- **Advanced Modern JavaScript/TypeScript**: 15+ years - pure-JS framework built via hackathon, Personal Projects
- **Automated Testing**: 8+ years - specialisation in ensuring that code pathways and edge cases are tested meaningfully and without memory leaks (**Jasmine**, **Jest**, **Protractor**, **Playwright**, **TestCafé**)
- **Software Excellency**: Proactively prevents technical debt with **clean and well-architected** code
- **CI/CD**: 5+ years - authoring and maintaining GitHub actions, GitLab tasks, VSCode launch configurations, and npm pre-commit script chains; containerized development setups in Docker
- **Mentorship**: Developed junior assets by teaching industry best practice and strong engineering fundamentals; coached non-technical colleagues on how to apply their skills in technical projects
- **UI/UX**: 10+ years - able to efficiently remove barriers and simplify workflows without compromising features or quality

Relevant Work Experience

Kibeam Learning - Senior Full-Stack Consultant

2025/03 - 2025/12

Ottawa, ON (Remote)

- **Reduced developer onboarding time by 83%**; wrote docker containers and start-up scripts, added missing setup documentation, and fixed broken and insecure workflows
- **Increased productivity by nearly 100%** for the audio team by fixing critical workflows which prevented certain users from accessing tooling; enabled additional functions with the Media API
- **Modernised and streamlined** production systems via major version upgrades for Svelte, automating deployment pipelines, and redesigning and refactoring complex systems
- **Interfaced directly with internal stakeholders** in both a support and advocacy capacity to diagnose pain points and create actionable plans for improving tooling

CORS TestFlight Start-Up Agile

Kinaxis - Senior Software Developer, Clients, Front-End Technologies

2024/09 - 2024/11

Kanata, ON (Hybrid)

- Created a **lightweight and extensible JavaScript framework** for building dynamic, API-driven web pages with JSON in only **4 days**
- Executed **cross-functional, full-stack fixes and feature updates to enterprise systems** using both React and Java

Staff Front-End Engineer

I Build Experiences

Relevant Work Experience

Cinchy - Experiences Developer III

2022/11 - 2024/06

Ottawa, ON (Remote)

- **Reduced average weekly support tickets and investigation time by over 90%** for a core applet by completing a major refactor which eliminated complex asynchronous bugs and instability
- Oversaw **simultaneous Angular upgrades** from versions 12 to 17 for 3 projects with shared dependencies
- Owned **full-stack solutions** for new features, including wireframes, database queries, API development, and front-end building

Angular RxJS React TypeScript Jasmine SCSS JavaScript ASP.NET Razor C# Angular-Material Bootstrap SQL Docker
Figma Start-Up Agile

Shoplifr - Senior Developer

2017/09 - 2022/11

Ottawa, ON

- **Wrote, maintained, and enforced company-wide UI/UX standards**
- Designed new features in **Figma** and created for ad units in **Photoshop** as the lead designer
- Improved unit test coverage for shared component library and data entry platform by **over 1800%**
- Bridged feature gaps by implementing data models and building associated API endpoints, enabling tooling which **drastically improved organizational efficiency** for remote teams

Other Noteworthy Roles and Projects

- **CV: The Movie** - My second attempt at a solution to the challenge of "build something interesting in Angular." I wanted a way to highlight some of my CV's points of interest while paying homage to my love of video games. This could very easily be expanded into a cutscene engine for an angular-based browser game (<https://cv-movie.dominicaquilina.com/>)
- **Algorithm Practice** - A catch-all repository for experimenting with various JavaScript algorithms, storing (and analysing the complexity of) leetcode solutions, and building a library of comprehensive regular expressions (<https://github.com/DAquilina/algorithm-practice>)
- **Kibeam Interactive Grid** - Created as part of Kibeam's technical assessment, written in vanilla JS to explore the depth of the language (<https://github.com/DAquilina/daquilina-kibeam>)
- **Hamburger Menu** - Always a fan of a good pun, I had the idea for this playful twist on the standard UI element and made it real. (<https://www.dominicaquilina.com/portfolio/hamburger>)
- **Animatronic Sorting Hat**: A CLI app developed in Python for a self-contained system driven by a Raspberry Pi; involved custom wiring and sewing a servo-controlled custom machined jaw into a hat enclosure and writing a Python service to ingest sound bytes and synchronise the jaw's movement as they played (<https://www.dominicaquilina.com/portfolio/sorting-hat>)
- **Local Line** - Architected an AgTech platform from scratch using emerging technologies as the lead front-end developer; coordinated API handshakes, designed complex features, and developed SREdable framework patterns

Certifications and Accreditations

- **Bachelor of Applied Science, Computer Engineering**, Honours, Co-Op, University of Waterloo
- **Google Cybersecurity Certificate**, Google Career Certificate via Coursera
